# Charles抓包

- 1.Charles安装: https://www.charlesproxy.com/download/
- 2.安装SSL电脑证书:

电脑打开Charles, 选择Help->SSL Proxying->Install Charles Root Certificate

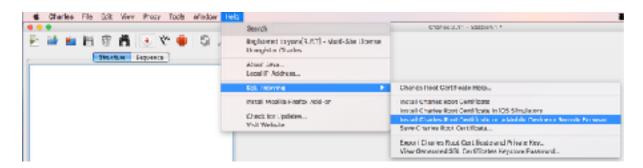

找到Charles Proxy...ost证书,双击它,再在使用此证书时选择"始终信任",如图:

#### 3.安装手机证书:

打开Charles, 选择Help->SSL Proxying->Install Charles Root Certification on a Mobile Device or Remote Browser...

会提示如图,意思是需要打开手机:设置->无线局域网->进入你的WiFi详情页->HTTP 代理,选择"手动",

"服务器"处输入提示的: 192.168.xx.xx

"端口"处输入: 8888

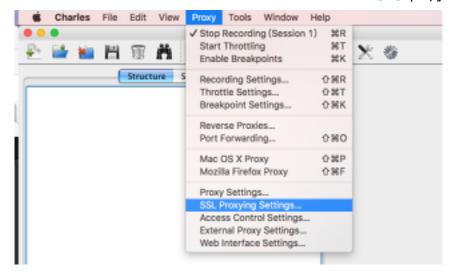

然后,打开手机的Safari浏览器,输入网址: <a href="http://charlesproxy.com/getssl">http://charlesproxy.com/getssl</a> 一路点"安装",最后如图:

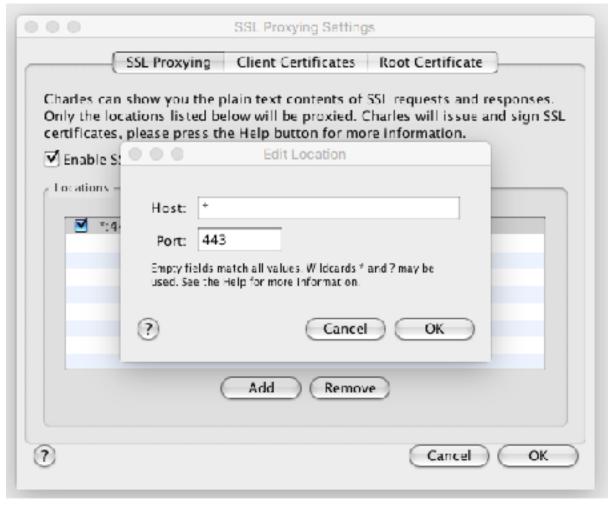

4.这时候只差最后一步了,还需要设置Charles的https抓包规则,这里我们将选择全部抓包:

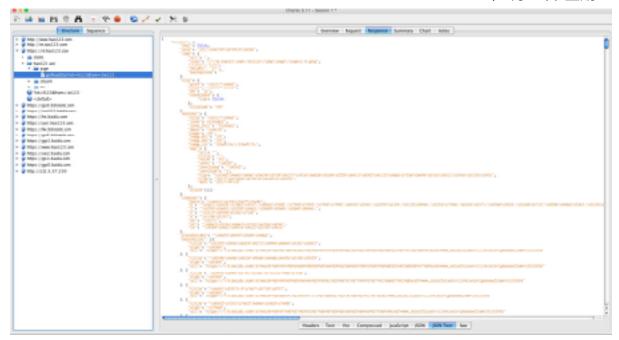

打开Charles, Proxy->SSL Proxying Setting...

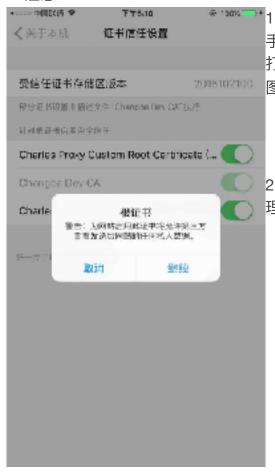

勾选Enable SSL Proxying,点击"Add",在Host中输入\*,Port中输入443,然后点OK保存,如图:

5.让手机打开https的网页,Charles即可看到请求,如图:

## 注意:

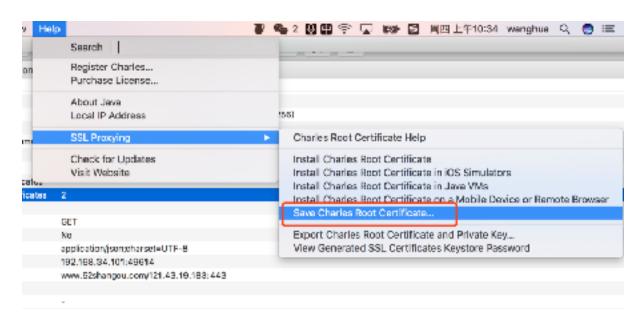

1.如果是iOS 10.3的真机,在上面第4步后,需要到手机的:设置->通用->关于手机->证书信任设置->打开Charles证书,否则,无法抓到https的包,如图;

2.如果不需要抓包的时候,需要关闭手机的HTTP代理设置,不然关闭Charles后,手机会连不上网络。

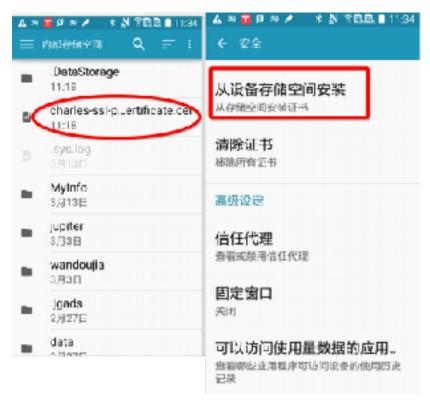

## Android证书安装教程:

如下图所示,先下载证书,保存为.cer文件格式,然后把保存在电脑的本地的文件导入到手机中

adb push /Users/admin/Desktop/charles-ssl-proxying-certificate.cer /sdcard/

adb push /Users/pazq/Desktop/Charles/charles-ssl-proxying-certificate.cer / sdcard/
